This collection of door panels are produced to the highest standard using top quality raw materials. In this brochure you will find just a few of many different designs available complemented with fine decorative glass.

Due to our policy of continual research and development we reserve the right to change specification without prior notice. Oxidisation of lead is a natural process and therefore can not be accepted as a fault. Whilst every effort is made to match the colour used in the decorative glass, due to the nature of photographic reproduction colours shown are for guidance only.

Panels are available with reinforced cores using various thickness MDF or ply board, sandwiched between the layers of high density fire resistant polystyrene - British Standard BS4 76.

All skins and insulating materials are bonded together using a moisture curing polyurethane adhesive, specially designed for the panel manufacturing and laminating industries.

A large range of obscured glass and high quality stained units are available in a wide range of designs. Our skilled craftsmen can also produce custom designs.

All panels are available with letter boxes, knockers, numbers and cut to size.
